WHAT'S INSIDE

AUGUST TIN MARKET REVIEW

- London Metal Exchange

NEW HIGHLIGHTS

- MSC Second-Quarter Earnings at RM28.45mil
- Higher Output Set to Enhance MSC Earnings

NEWS ROUND-UP

- Renison's Q2 Production Rose on Improved Grades and Recoveries
- Positive Impact at Penouta Mine after Mill Upgrade
- Andradra Mining Secures Financing to Boost Tin Production
- Further Details of Wa State Mining Suspension Revealed

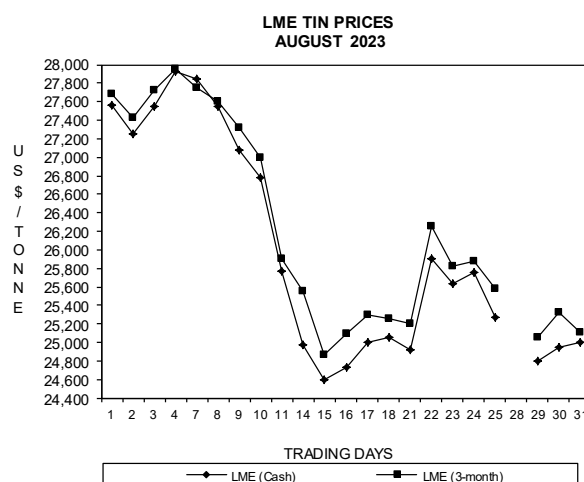

TIN STATISTICS

- KLTM & LME Tin Prices
- World Refined Tin Stocks
- Production, Number of Mines & Employment by Mining Methods
- Malaysian Production, Import & Export
- Malaysia's Domestic Tin Consumption
- World Mine Production
- World Refined Tin Consumption

The Malaysian Tin Bulletin is published by the Secretary of the Tin Industry (Research and Development) Board, Ministry of Natural Resources, Environment and Climate Change. The Bulletin is prepared from information obtained from official or other sources believed to be reliable and accurate. The Tin Board, however, cannot accept any liability for any error or omission therein.

AUGUST TIN MARKET REVIEW

London Metal Exchange (LME)

Tin trading on the LME during the month of August was conducted within a wide price range of almost US\$3,400 per tonne. Meanwhile, the month's average cash and 3-month tin prices of US\$25,995 and US\$26,211 per tonne, respectively were lower than those recorded in July.

The market kicked start the first trading week at US\$27,560 per tonne for cash tin and US\$27,680 per tonne for 3-month tin. It slid before strong demand pushed up the tin price towards end of the trading week to reach the month's highest price level for cash and 3-month tin at US\$27,925 and US\$27,950 per tonne, respectively, both recorded on 4th August.

The earlier price rise did not sustain, as a major correction that came thereafter caused the tin price to plunge throughout the second trading week. According to a trader, the decline was also due to profit taking by investment funds, which took advantage from the earlier higher prices.

The tin price fell further going into the third trading week to record the month's lowest price level for cash and 3-month tin at US\$24,600 and US\$24,860 per tonne respectively, both recorded on 15th August. It reversed upwards, thereafter, to end the trading week higher.

The market rose during the second day of the fourth trading week. The incline, however, was short lived as it eased towards end of the trading week.

Throughout the final trading week the tin price stayed somewhat flat, and closed the trading month of August at US\$25,000 and US\$25,110 per tonne for cash and 3-month tin, respectively.

NEW HIGHLIGHTS

MSC Second-Quarter Earnings at RM28.45mil

Malaysia Smelting Corp Bhd (MSC) is maintaining a cautious front and will continue to focus on operational efficiencies. In a filing with Bursa Malaysia, the integrated producers of tin metal and tin-based products said it would also continue to focus on improvements on all areas of operations, technology, manpower and logistics in its smelting and mining business segments.

"The current tight monetary policy and high inflationary environment continue to put pressure on the global economy, with moderating growth prospects likely for the remaining second half of 2023 and early 2024," it said.

For its second quarter ended June 30, 2023, MSC's net profit dropped to RM28.45mil from RM39.45mil in the previous corresponding period. Revenue, meanwhile, was lower at RM327.01mil compared with RM408.84mil a year earlier. Basic earnings per share stood at 6.80 sen versus 9.40 sen previously.

MSC said its tin smelting business recorded a net profit of RM16.3mil during the quarter under review, driven by higher profits from increased sales of refined tin derived from processed tin intermediates, by-products, and smelting revenue.

"Meanwhile, the tin mining segment posted a net profit of RM17.2mil in the second quarter ended June 30, 2023. Earnings were affected by softer average tin prices of RM116,500 per tonne, versus RM158,900 per tonne in the second quarter of the previous financial year."

For the six-month period ended June 30, 2023, MSC's net profit dropped to RM63.86mil from RM103.79mil a year earlier, while revenue fell to RM667.07mil from RM768.31mil previously.

Commenting on the group's performance, MSC group chief executive officer Datuk Patrick Yong said MSC achieved higher volumes of refined tin production and increased tin mine output in the first half of 2023, compared with the first half of 2022.

"However, our performance was offset by the less favourable tin price movements, which averaged 31% lower at RM116,300 per tonne in the first half of 2023. As we move forward, we are committed to improving operational efficiencies across all aspects of our smelting and mining business segments."

At the Pulau Indah smelter, Yong said MSC is looking forward to higher yields with lower carbon footprint, as well as lower manpower and energy costs, using the more efficient top submerged lance furnace.

"With the planned decommissioning of the Butterworth plant in 2024, we expect to achieve cost savings of up to 30%. Until then, there is a duplicate of expenses with both plants running."

For our mining division, Yong said the group remains focused on enhancing daily mining output and overall productivity at its Rahman Hydraulic tin mine in Klian Intan.

"Our efforts include exploring new tin mine resources to expand our mining activities. Through these strategic initiatives, we remain steadfast in our commitment to sustainable growth, while building a solid foundation for MSC to address challenges and capture emerging prospects."

Higher Output Set to Enhance MSC Earnings

Malaysia Smelting Corp Bhd (MSC) is expected to continue experiencing growth from its operations locally while profit margins could see an improvement from one of its plants. This will be aided by new technologies as it aims to increase its mining output with recent new jobs. According to UOB Kay Hian (UOBKH) Research, MSC's average daily mining output rose to around 10.5 tonnes per day from 9.5 tonnes per day last year and this is anticipated to grow further.

"The company will continue to boost output to 12 tonnes per day in 2023 with the utilisation of new technology and exploration of new deposits. With recent new mining areas, MSC is expected to enhance its mining output to over 15 tonnes per day, which will boost earnings by around 20% in the next two to three years," it said.

MSC also plans to undertake geological studies of the land and will construct additional tailing ponds once the studies

are completed, it said. Commenting on its smelting division, UOBKH Research said this had become a major contributor to its earnings, having recorded a profit of RM24.9mil in the second quarter despite it being a 33% drop quarter-on-quarter (q-o-q).

The q-o-q weakness was due to lower sales quantity of refined tin in the second quarter as a result of the planned two-month annual shutdown and maintenance of the top submerged lance (TSL) furnace at Pulau Indah that commenced at the beginning of June 2023, it noted.

UOBKH Research said that since the furnace has resumed operations this month, MSC can then allocate higher capacity and achieve a good balance between smelting of third-party ore and intermediates to improve margins. Meanwhile, it noted that MSC's Pulau Indah plant will help spur its margins this year.

"With a full commission, MSC expects higher operational efficiency to boost margins this year. As at end-June 2023, the Pulau Indah plant has reached 90% capacity and it targets to hit 100% in 2023," UOBKH Research said.

The plant has a 50% higher capacity, which yields an additional 20,000 tonnes per year, it noted.

"The plant boasts production costs that are at least 20% lower than the old ones in Penang, as it has better efficiency. Higher average tin prices will help to partially offset the elevated production costs for energy, fuel and labour amid the ongoing inflation," the research house said.

Despite a fall seen in MSC's recent quarterly results, UOBKH Research said this was mainly due to lower sales quantity of refined tin on the planned two-month annual shutdown and maintenance of the TSL furnace at Pulau Indah that commenced at the beginning of June 23.

"However, we still expect MSC to perform better year-on-year as a ramp-up in production volume can help to further support earnings this year," it said, maintaining its "buy" call with an unchanged price target of RM2.69 on the counter.

NEWS ROUND-UP

Renison's Q2 Production Rose on Improved Grades and Recoveries

Metals X Limited has announced a strong second quarter at its Renison Tin Operation in Tasmania, Australia, highlighting enhanced ore grades and recovery rates.

For the June 2023 quarter, tin-in-concentrate production rose by 15 per cent to 2,292 tonnes compared to the first quarter. Despite headwinds due to elevated talc and sulphur grades in the first quarter, interventions were successfully introduced, increasing the second quarter recovery rates to 76.05 per cent from the previous 74.20 per cent.

Meanwhile, processed ore grades increased, in line with the mine plan. With new high-grade material extracted from Area 5 entering the processing plant, average grades processed reached 1.79 per cent Sn, the highest grade recorded since June last year.

With the above noted improvements in operations, costs decreased during the quarter, albeit remaining elevated. Cash costs, All-in Sustaining Costs and All-in Costs were all

down roughly by 10 per cent on the quarter and aligned with the second quarter 2022 levels.

Metals X expects production to be bolstered during the second half of the year as access to Area 5 improves. Access to certain areas of Area 5 has been difficult during the second quarter due to water management issues. With medium and long-term pumping plans either set for implementation or under development, improvements are expected from the third quarter.

Progress on the project remained steady in the second quarter although there were delays in equipment delivery and installation. Completion of a geophysical survey for the proposed processing plant area and geochemical and hydrogeological reviews of the site were highlighted. The company also expects the trials for the Furnace Technology selection of the Renison tailings project to be completed in the third quarter.

Positive Impact at Penouta Mine after Mill Upgrade

Strategic Minerals Europe Corp (SME) saw record quarterly production at its Penouta mine following an overhaul to its main ball mill.

Penouta mine, located in Spain, is EU's largest active tin mine. It produced a record 206 tonnes of tin concentrate at 69.7 per cent Sn for the second quarter of 2023. The resulting tin-in-concentrate production of 144 tonnes is also a record for the mine, an increase of 32 per cent compared to the same quarter last year.

The company's spokesman explains the reason for the improved performance, stating "the second quarter of 2023 was the first quarter of full production after we completed the major overhaul of our main ball mill in February."

The overhaul took 21 days to be carried out. It is to avoid future mechanical breakdowns and stoppages that could hamper operations in the run-up to February. Production during the fourth quarter of 2022, when disruptions were most severe, declined by almost half from levels in the third quarter.

Despite a fall in tin price relative to last year, improved production has had a positive impact on SME's sales, resulting in revenue reported to be roughly flat year-on-year. Cassiterite sales rose by 37 per cent to 193 tonnes for the second quarter compared to last year.

The company's spokesman added "for the rest of 2023 and forward, we expect to continue to benefit from this increased production and efficiency."

Andrada Mining Secures Financing to Boost Tin Production

Andrada Mining Limited, formerly known as Afritin Mining, has signed a pivotal financing agreement amounting to US\$25 million. The financing agreement will lay the groundwork for a two-year tin production ramp-up, alongside its lithium and tantalum prospects.

The financing agreement is designed to increase Andrada's tin production while accelerating the commercialisation of its revenue streams. The agreement has been secured with the renowned mining investment fund, Orion Resource Partners. The financing is conditional upon the satisfaction of certain requirements.

Andrada Mining has been producing tin at its flagship Uis mine in Namibia since 2019. The company aims to ramp-up its tin operations in two main phases: Phase 1 and Phase 2. Completion of Phase 1B last year saw its tin concentrate production capacity increased by 67 per cent to 900 tonnes of contained tin per annum.

A spokesman of Andrada Mining commented, "The signing of the Orion financing agreement will provide sufficient capital to complete our expansion programmes at our flagship Uis operation."

Half of the US\$25 million funding comes through tin royalties, tailored to bolster Andrada's tin production initiatives. It is a dynamic rate structure, offering lower royalty rates as production levels rise. Starting at a base rate of 5.13 per cent, the royalty rate will drop to 0.86 per cent with the Phase 2 expansion, where the expected output is set to reach 10,000 tonnes per annum. The other half of the funding includes an equity subscription and a convertible loan limited to US\$10 million.

Meanwhile, a spokesman of Orion Resource Partners commented, "We regard Andrada as a high-quality investment opportunity. We are excited to begin our partnership with the company's top management and their team." Finalisation of this funding is anticipated by the end of September.

Further Details of Wa State Mining Suspension Revealed

Three weeks into the banning of mining activity in Wa State, new information has surfaced. The Wa State government has announced plans to approve processing plants and to change mineral rights ownership.

The cessation of all mining activities since 1st August has seen ore transport vehicles grounded and countless local workers temporarily laid off. The tin market has been keenly awaiting further details on Wa State's future plans to resume production.

In a document seen by International Tin Association (ITA) from the Wa Central Economic Planning Committee (EPC) dated 21st August 2023, there is added clarity on the ongoing situation. By 30th August, the mine owner is set to collaborate with the Central Affairs Committee to gain approval for mineral processing. The Central Affairs Committee will subsequently report back to the EPC, who will then register the processing plant. Details regarding the location, equipment, and scale are expected to be registered by the end of the month.

The situation for miners, however, remains uncertain. The EPC has not yet communicated specifics about when and how mineral prospecting and production might resume. The mining ban remains in full force.

The report also underscores changes to mineral rights ownership in Wa State. The ownership of ore mined and brought to the surface before 1st August will remain with the mine owner. Conversely, all ore still in the mine, including that which has already been extracted, now belongs to the EPC.

Processing plants can process their ore concentrates externally once the requisite approval is obtained. The processing of ore still owned by the mine owner is subject to a 30 per cent tax-in-kind. The Central Affairs Committee will oversee the verification of taxes paid, with stringent penalties for any discrepancies, including the potential for confiscation.

* : The figures include high-grade tin (99.9% Sn) imported for consumption.

n.y.a : not yet available

Note : Local consumption of tin metal refers to the use of tin in a particular application.
Sales to manufacturing industries have been used as proxy for consumption except
in the case of manufacture of tinplate which are actual tin consumption data.
